

Campus in the Pines

East Georgia State College is a 249-acre rural campus that enjoys a natural landscape of mature Longleaf pine forest, ponds, and creeks, making paramount the need for the design team to address the protection of ecological resources, stormwater, and create a vision for sustainable growth. The vision is broken into three phases to allow for immediate solutions and embolden the institutions commitment to sustainability for decades to come.

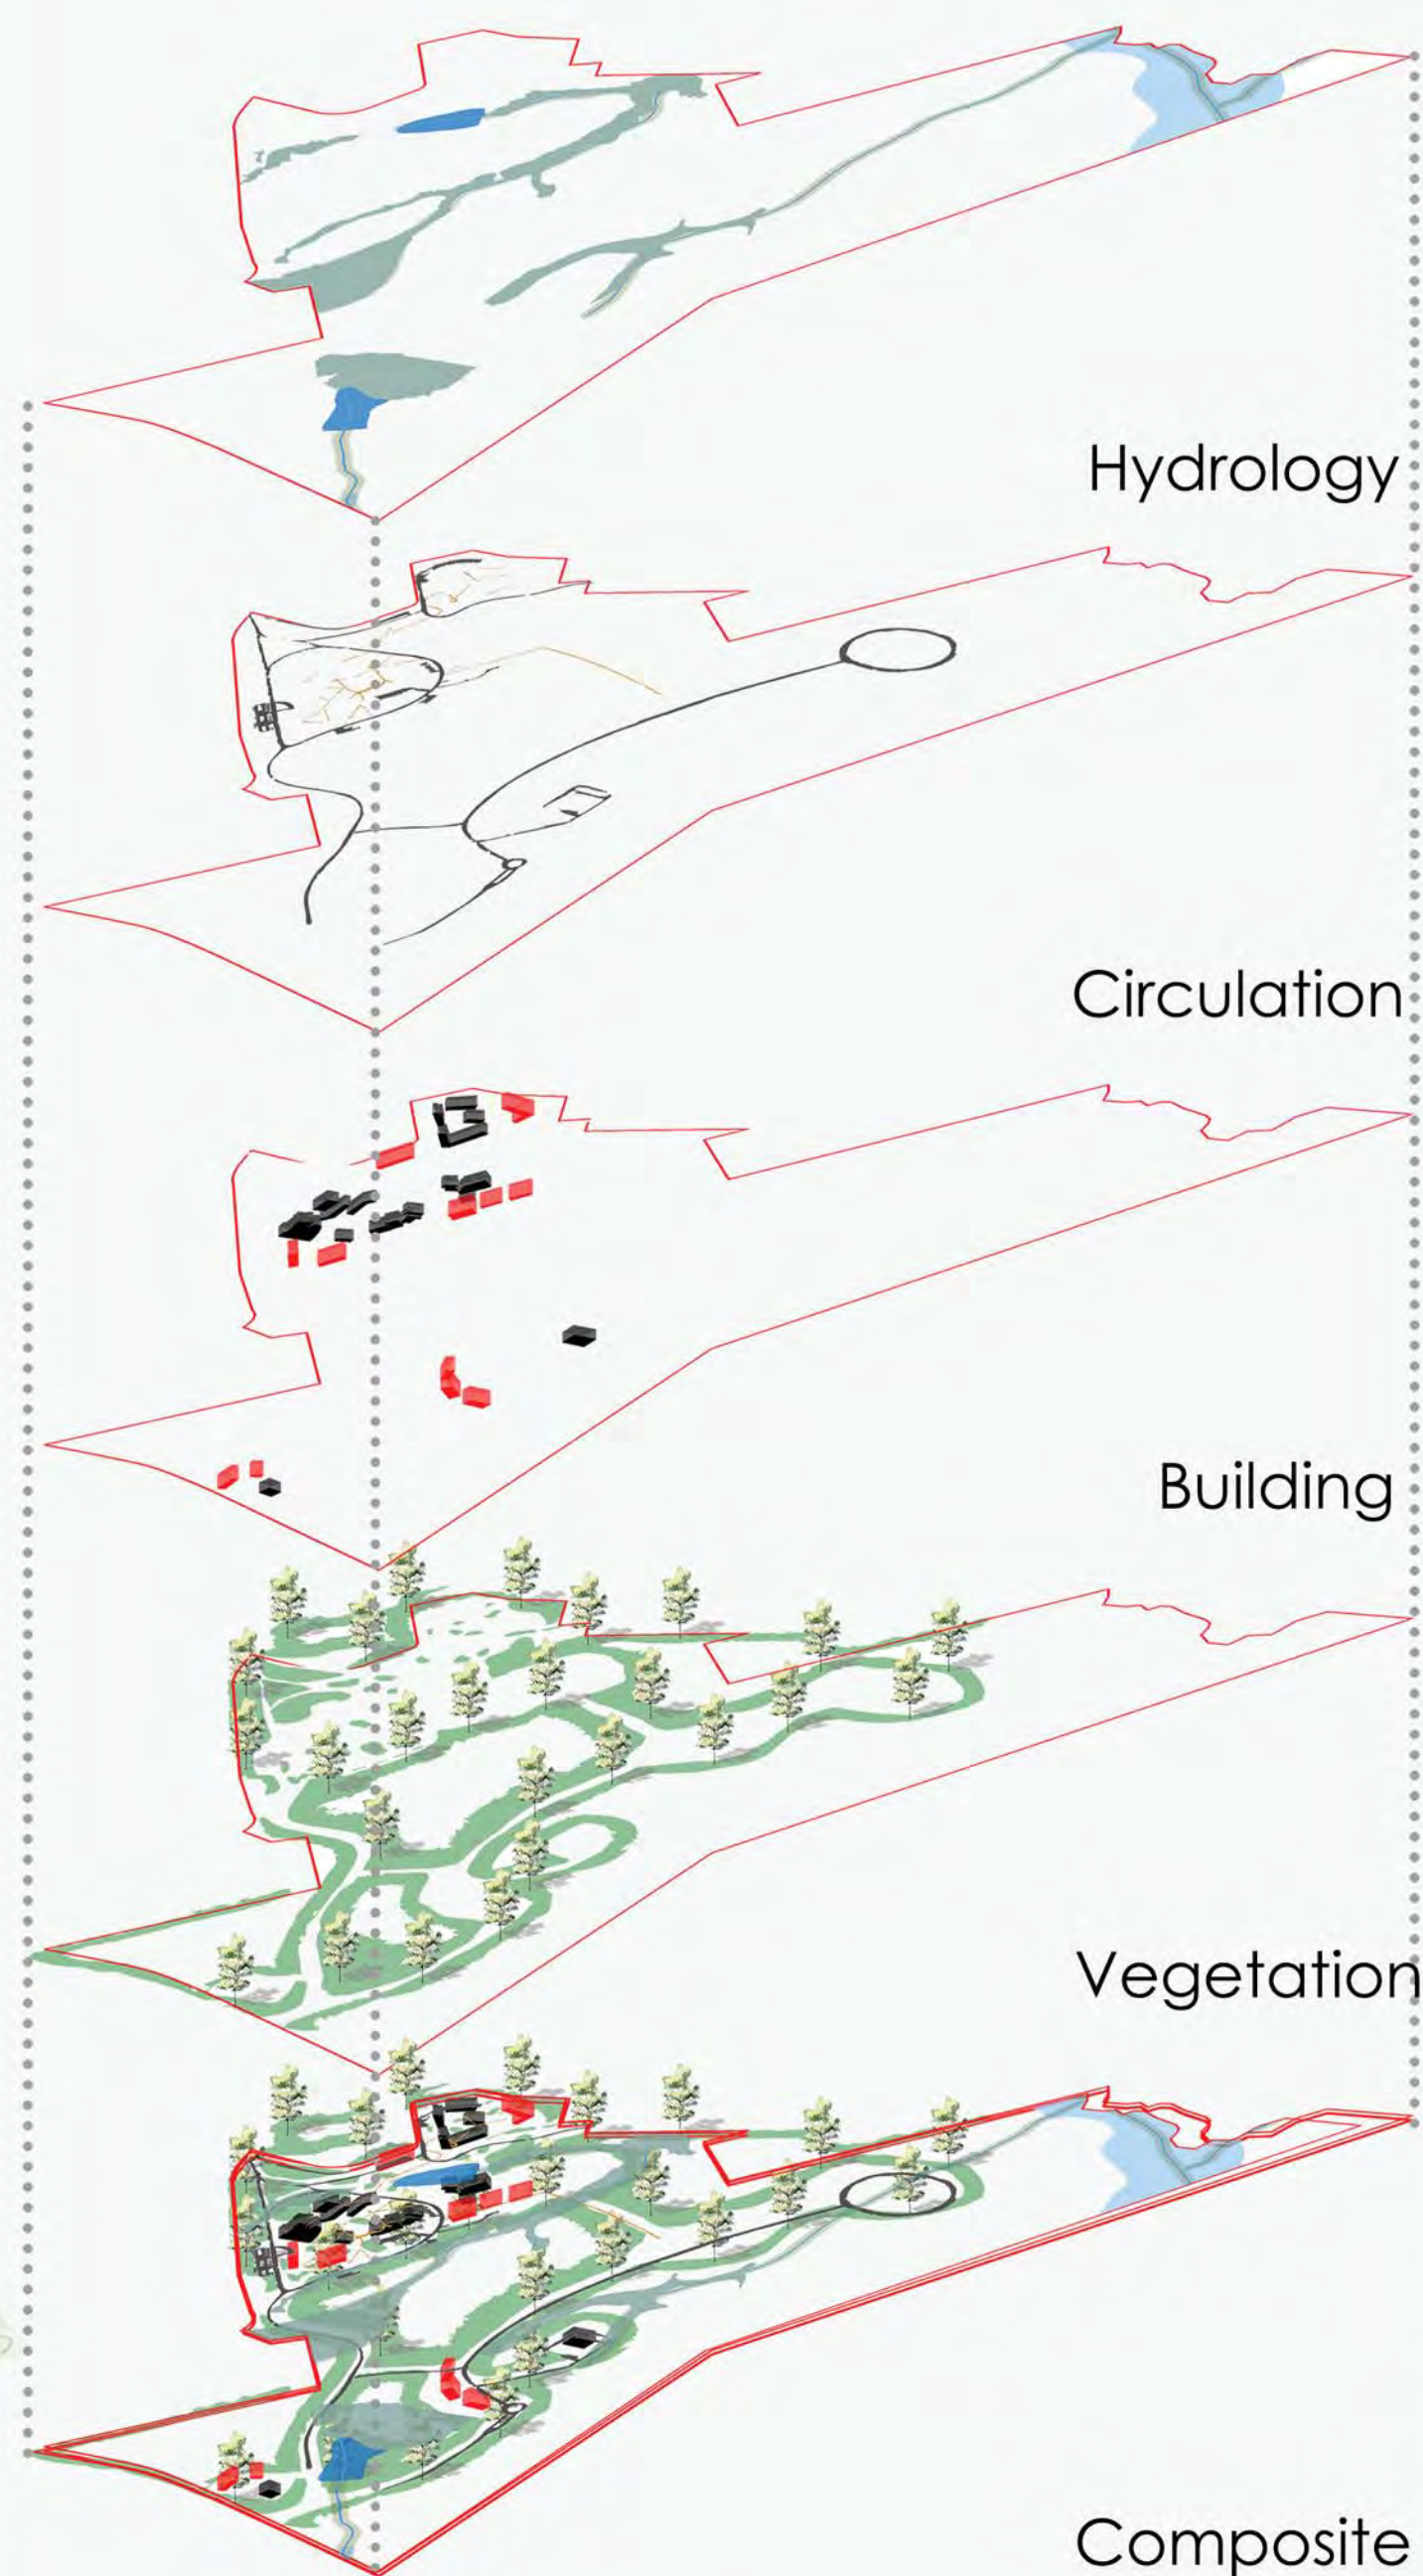

- Unifying the campus, giving it a distinct sense of place and linking it with the surrounding community
- Creation of an inspiring landscape that enhances the learning, living and working environment of the college
- Conserving the campus's unique environmental resources and managing stormwater onsite
