

# Community Air Monitoring Showcase Block 2

9:50 – 10:50 AM

---

# Roadside and urban NO<sub>x</sub> hot spots:

some applications of millisecond analyzers

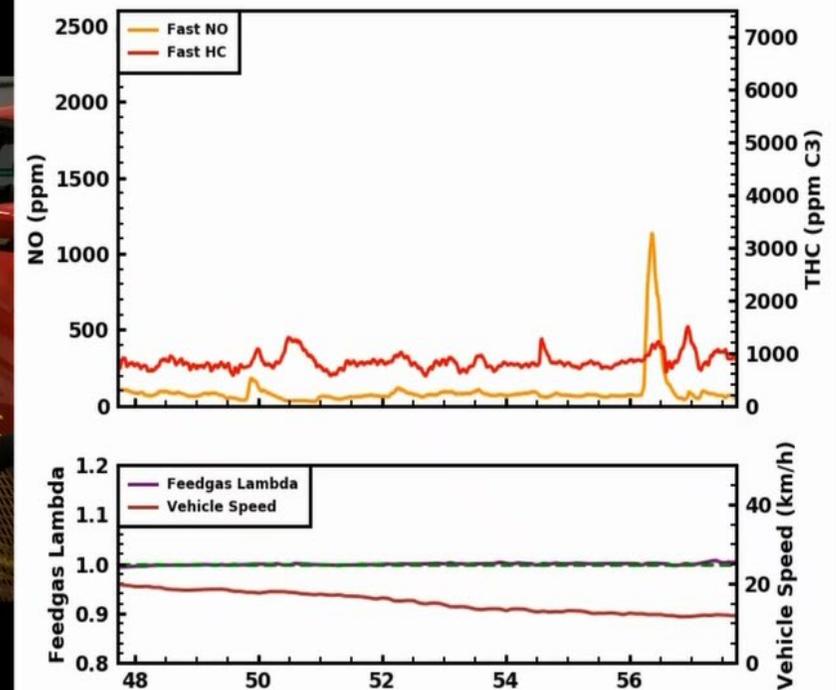

- 
- 
- 
- 

NAAMC 2024 – New Orleans, LA

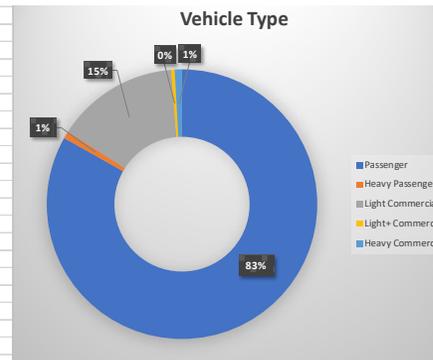

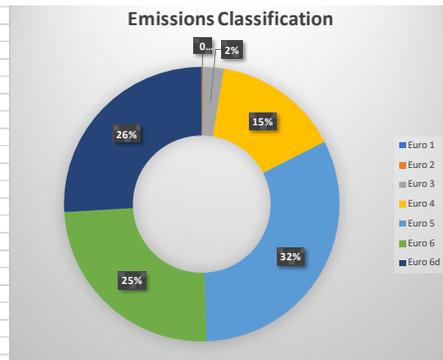

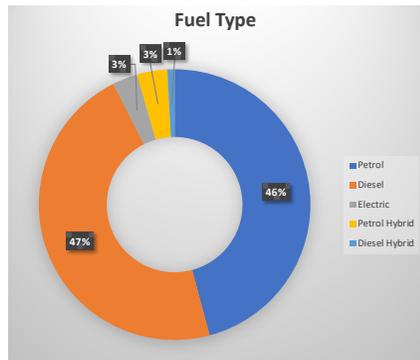

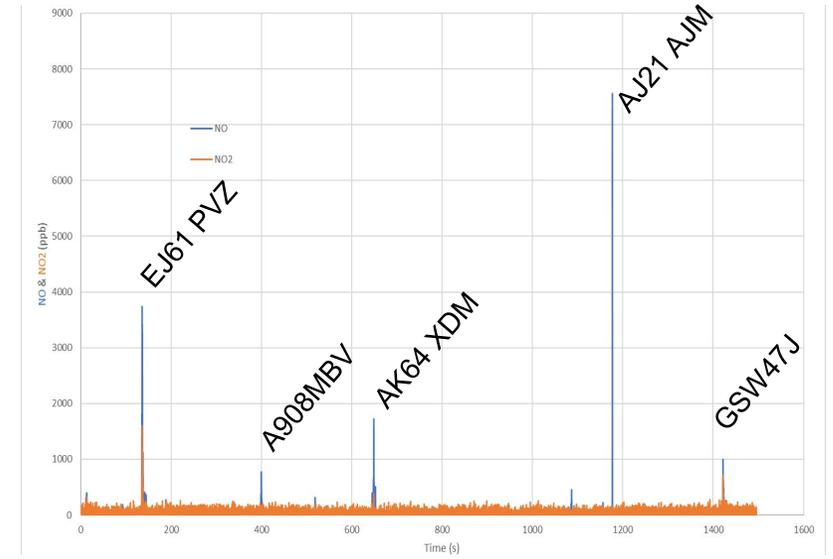

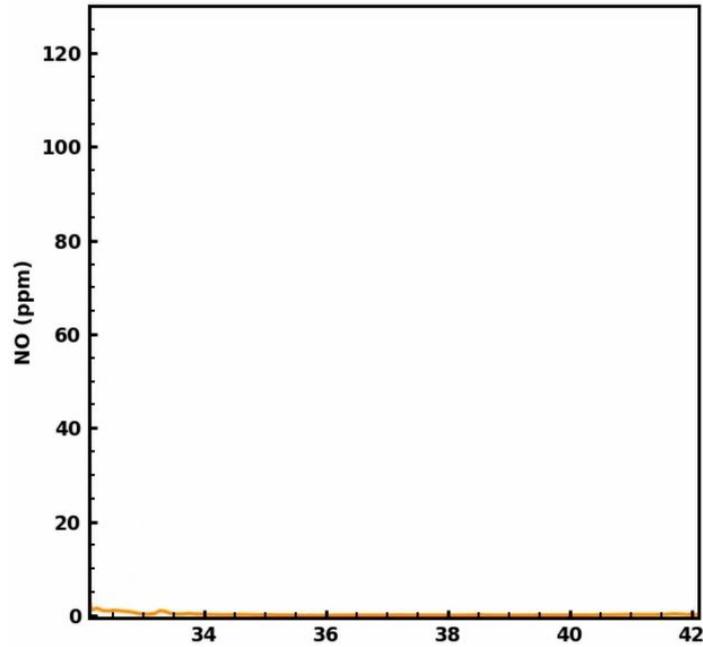

Jamie Parnell *MEng*

# Fast Response Gas and Particle Measurements

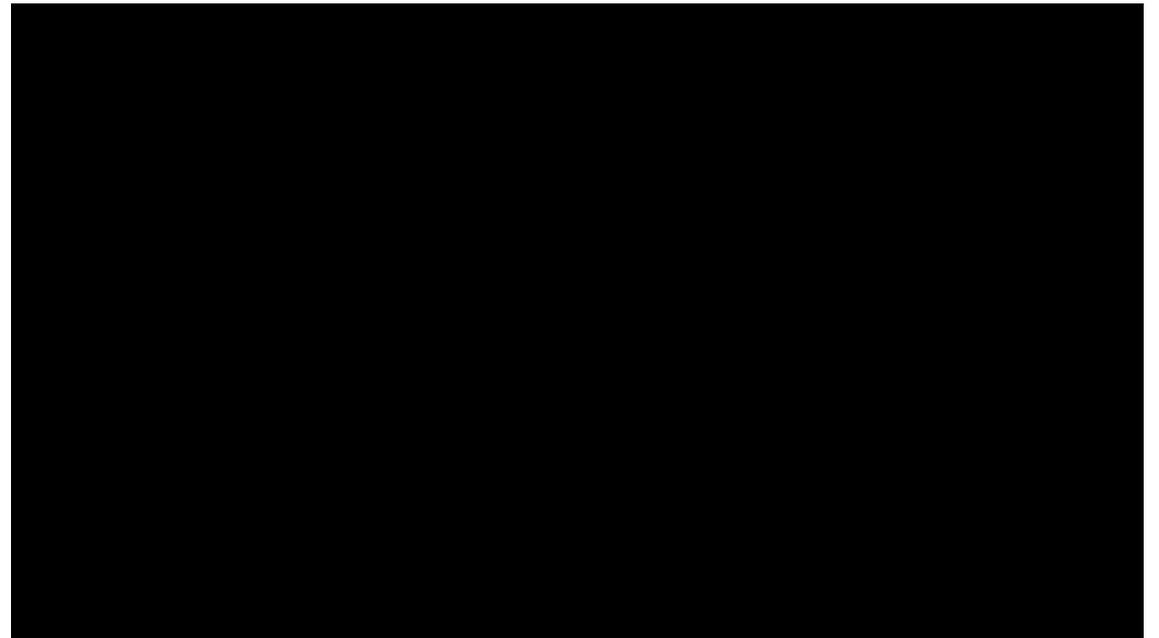

- Fast response analyzers to measure transient emissions (cold start, gear changes etc)
- Typical gas analyzers will respond in seconds
- Fast analyzers respond within *milliseconds*
- HC, NO & NO<sub>2</sub>, CO & CO<sub>2</sub>

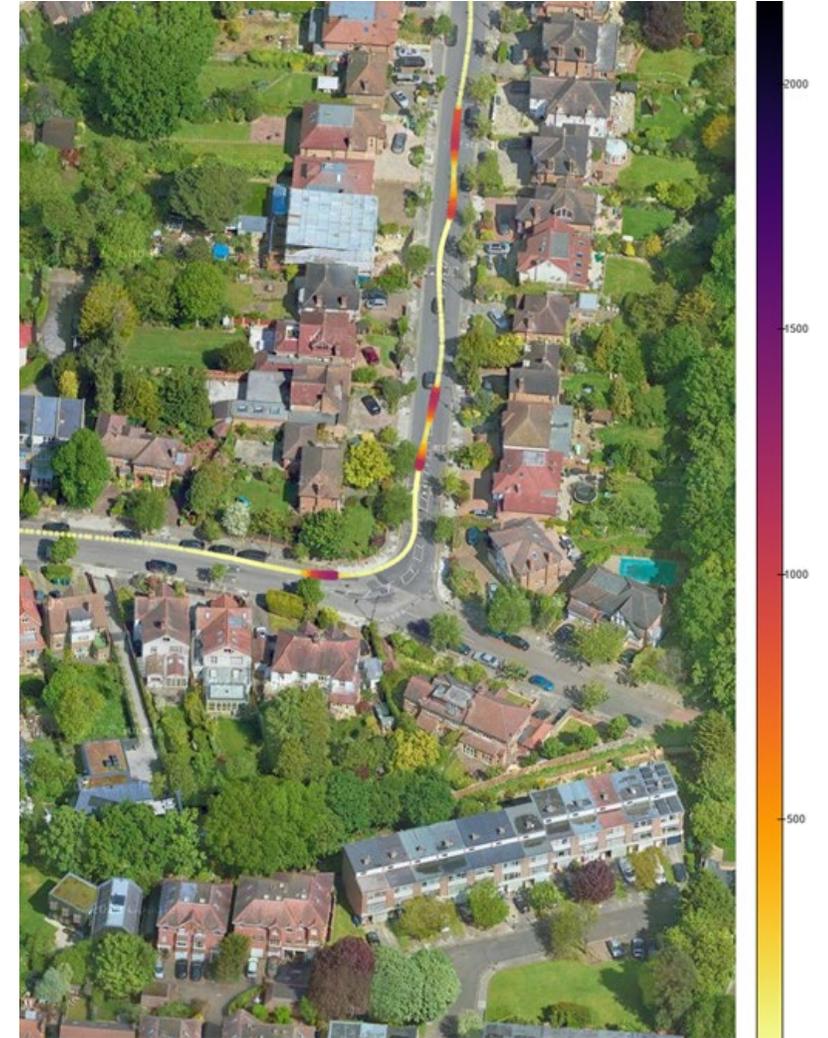

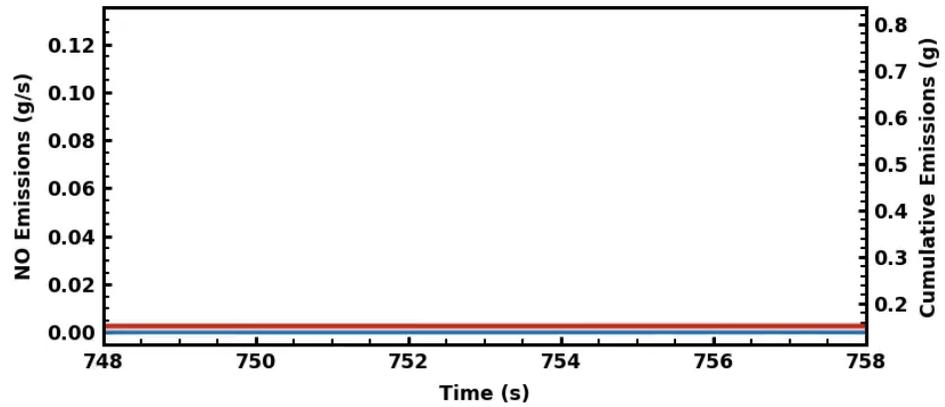

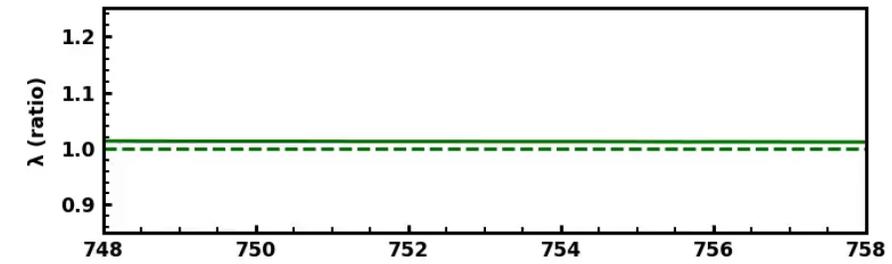

# Roadside Measurements of Passing Gross Emitter

# Human Exposure

# Effect of Road Design on Vehicle Emissions

# Enhancing air quality with advanced sensors technology

**Claudia Barrios Obregón**  
International sales director

**NEW ORLEANS**

**2024 National Ambient Air Monitoring Conference**  
August 12-15, 2024

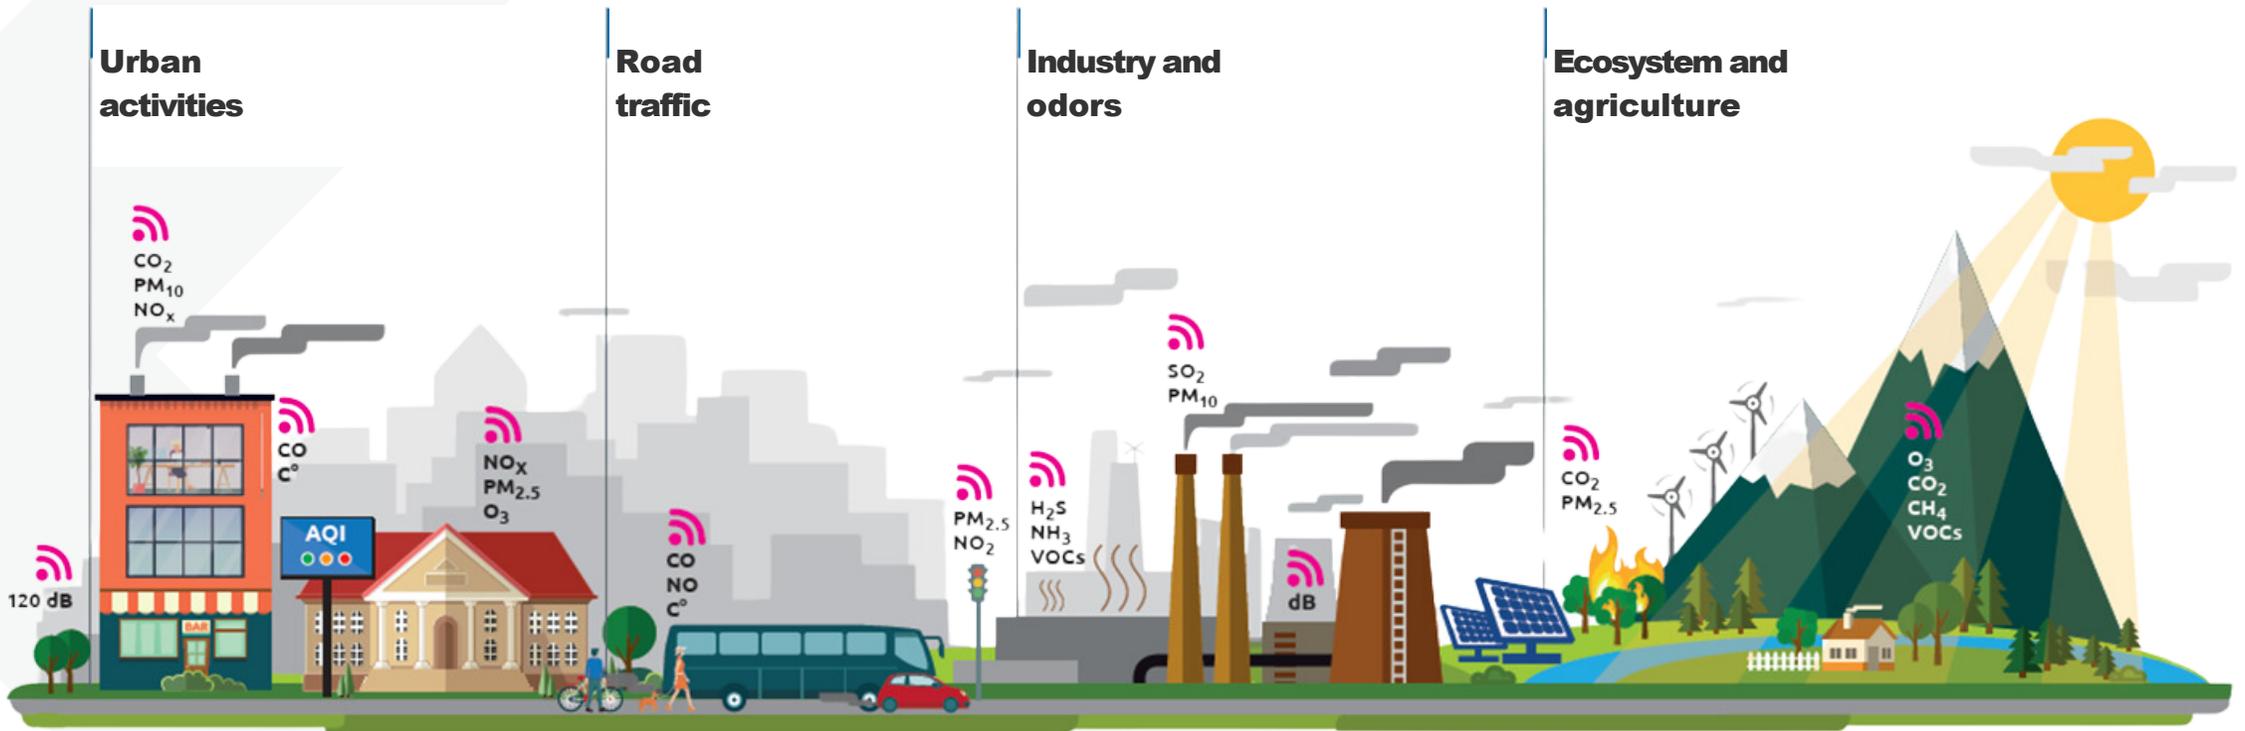

**AAPCA**  
THE ASSOCIATION OF AIR POLLUTION CONTROL AGENCIES

**EPA**

**NACAA**  
national association of clean air

The banner features a yellow background with a silhouette of a biplane flying across the top, pulling a banner that says "NEW ORLEANS". Below the banner, the text "2024 National Ambient Air Monitoring Conference" and "August 12-15, 2024" is displayed. The background includes a stylized cityscape with buildings and a large boat on the water in the foreground. At the bottom, the logos for AAPCA, EPA, and NACAA are shown.

# Community concerns and associated pollutants

# Advanced air quality sensors

Reference stations

>300k€

## Sensor-based stations

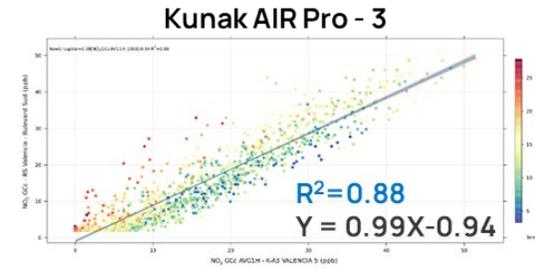

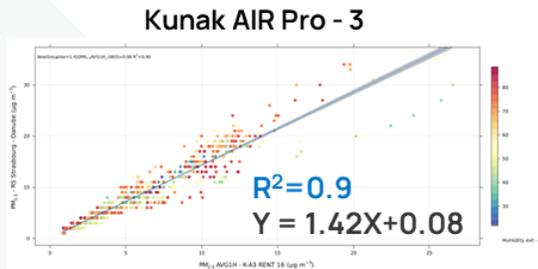

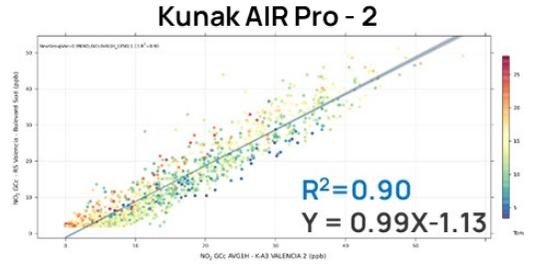

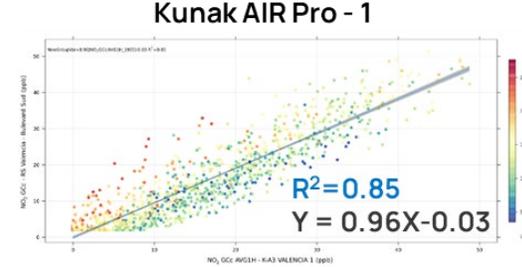

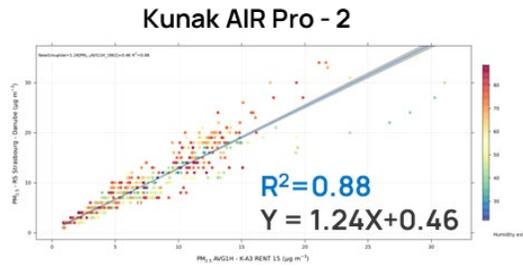

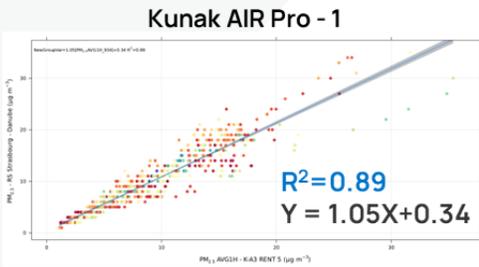

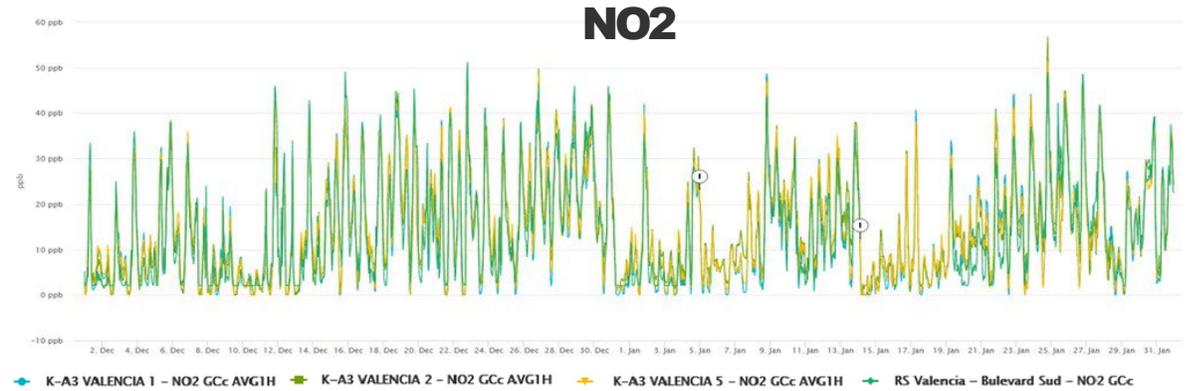

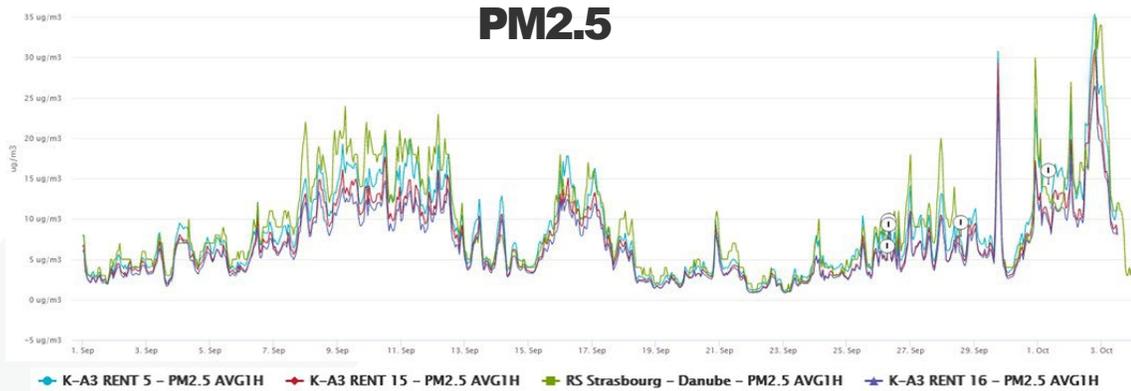

- ✓ 85% accuracy
- ✓ 2,500 times smaller
- ✓ Remote maintenance
- ✓ 97% cheaper

Community Air Monitoring Showcase

<10k€

# EPA testing protocols sensors performance

 **Kunak devices meet the EPA target performance values for air sensors**

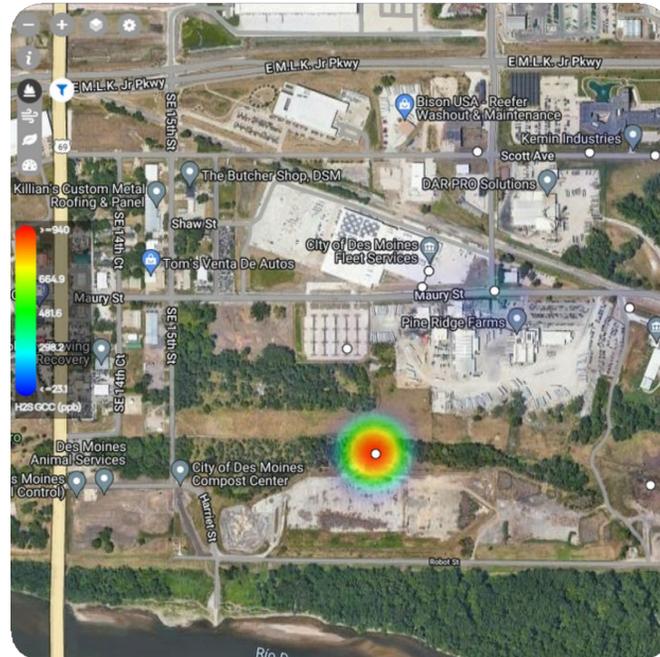

# Case study

## What's that smell?

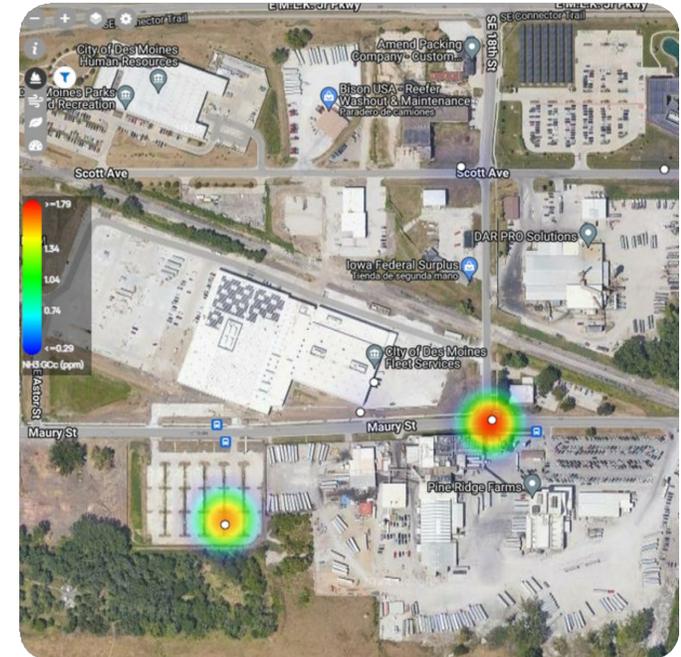

- Community close to a compost site
- Acceptable odor levels for the community
- New odor ordinance for the city
- Data quality consistent with local regulation
- Promote cooperation between the city and industry

Odour monitoring network  
Data-driven initiative

H2S-producing sources  
“Rotten eggs” smell

NH3-releasing sources  
“fishy” smell or urine

# Case study

## Where does each emission come from?

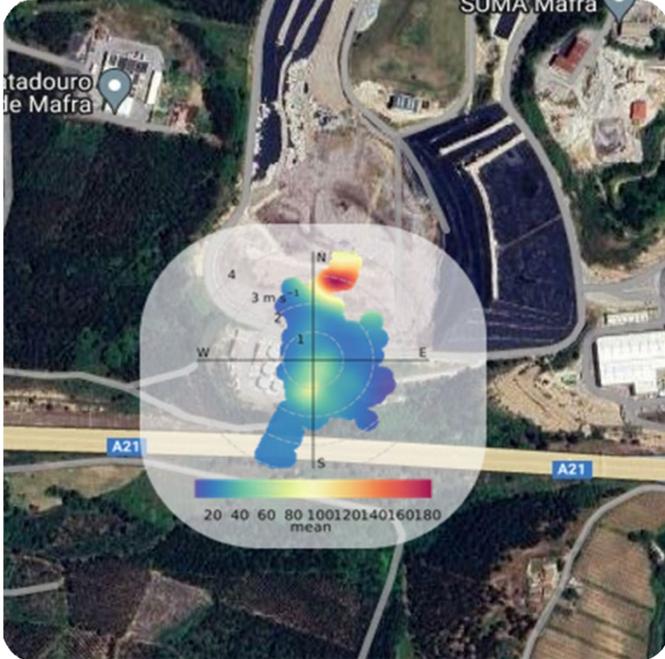

- Community close to a biogas plant
- Monitoring system to prevent odor nuisances
- Detection of pollutants from different sources
- Wind data helped to identify source direction
- Effective control to mitigate air pollution in the city

CH4 leakage detection coming from Biogas plant

NO2 identification coming from the road

PM10 contribution coming from different sites

## Sensing-as-a-Service<sup>SM</sup>

### Clarity Node Platform

#### Measures all key air pollutants

- Solar-powered
- Cellular-connected
- Easily installed within 5 minutes
- Add-On Modules for additional pollutants

### Clarity Cloud

#### Cloud-based data analysis

- Natively-integrated IoT dashboard
- Secure data pipeline & storage
- Powerful APIs, analytics and visualization

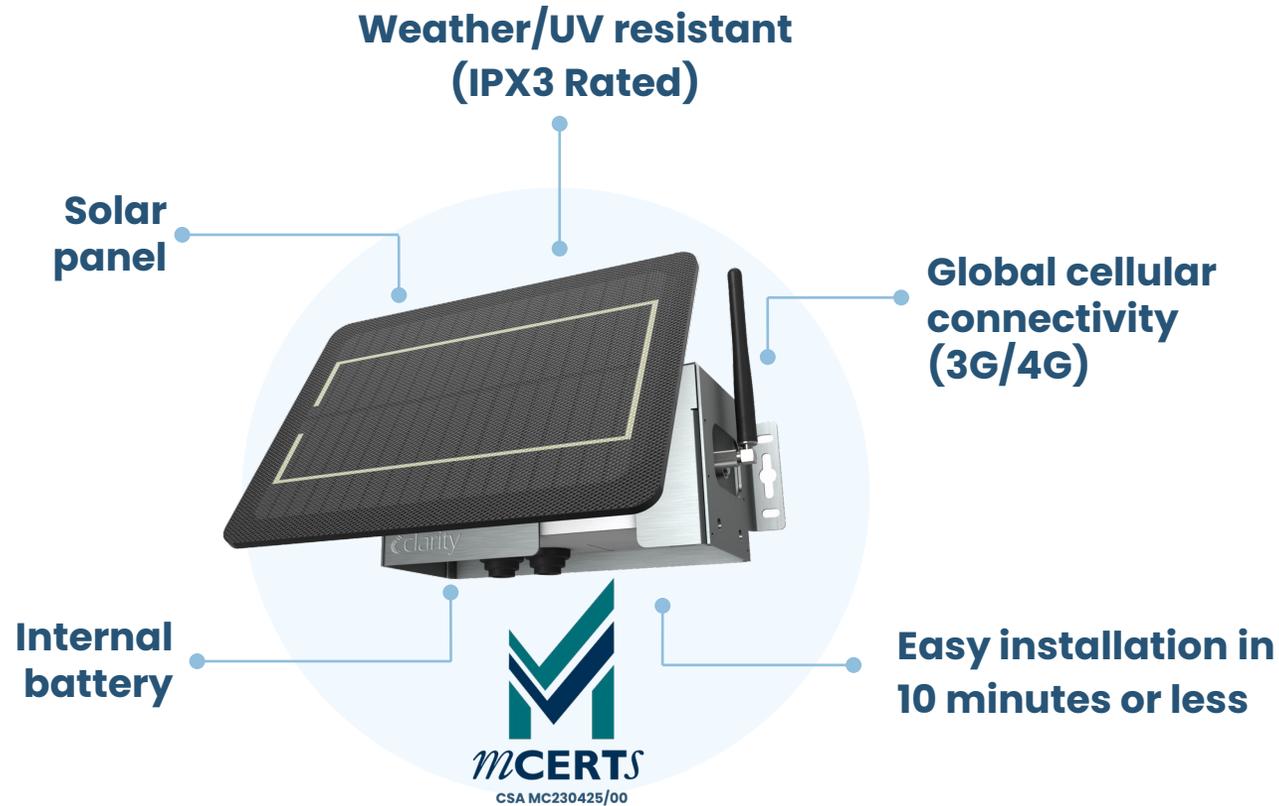

### Clarity Expert Support

#### Scalable project support

- Highly qualified air quality experts
- Accurate and reliable data through Remote Calibration
- Responsive project management enabled by modern software stack

# Clarity Node-S

Solar-powered, cellular-connected

Measures **PM** and **NO2**.

**FCC + CE certified** and designed for **easy deployment** everywhere, and **reliable operation** in adverse weather conditions.

# Clarity Add-On Modules

Easily measure additional pollutants

## Black Carbon Module

Understand the composition and sources of particulates.

## Ozone Module

Confirm ozone attainment with this FEM-capable device.

## Wind Module

Determine where air pollution is coming from.

# What makes the Black Carbon Module unique?

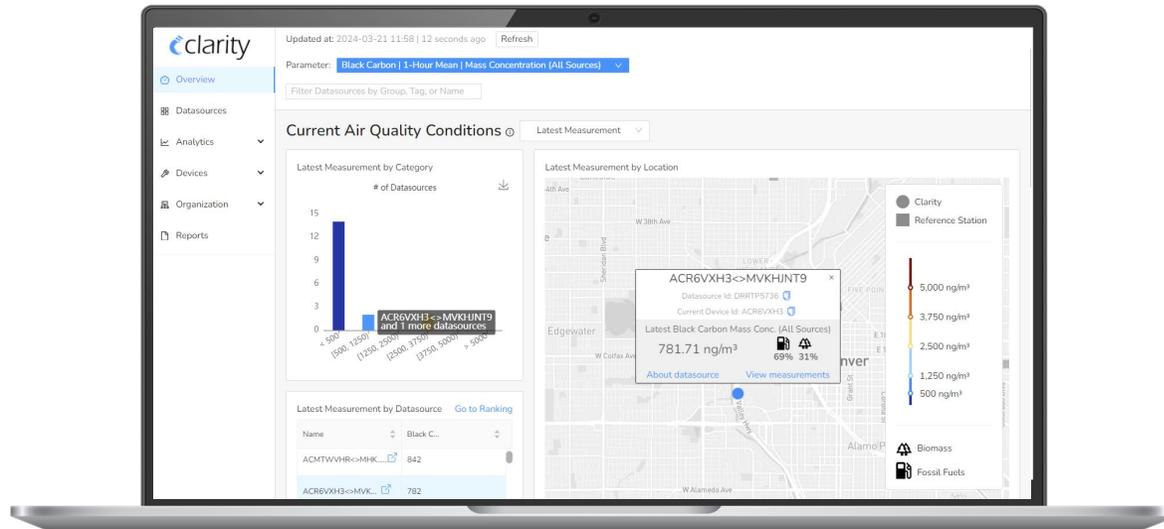

# 1

**Ease of deployment**

# 2

**Seamless data access**

# 3

**Collocated PM2.5 and BC**

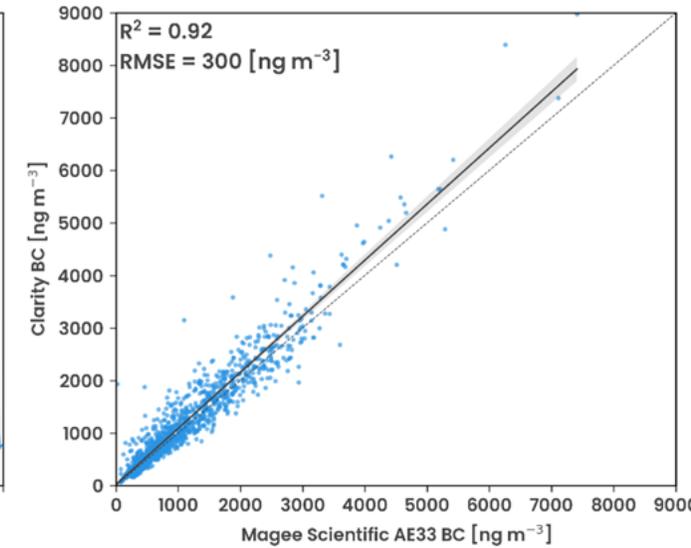

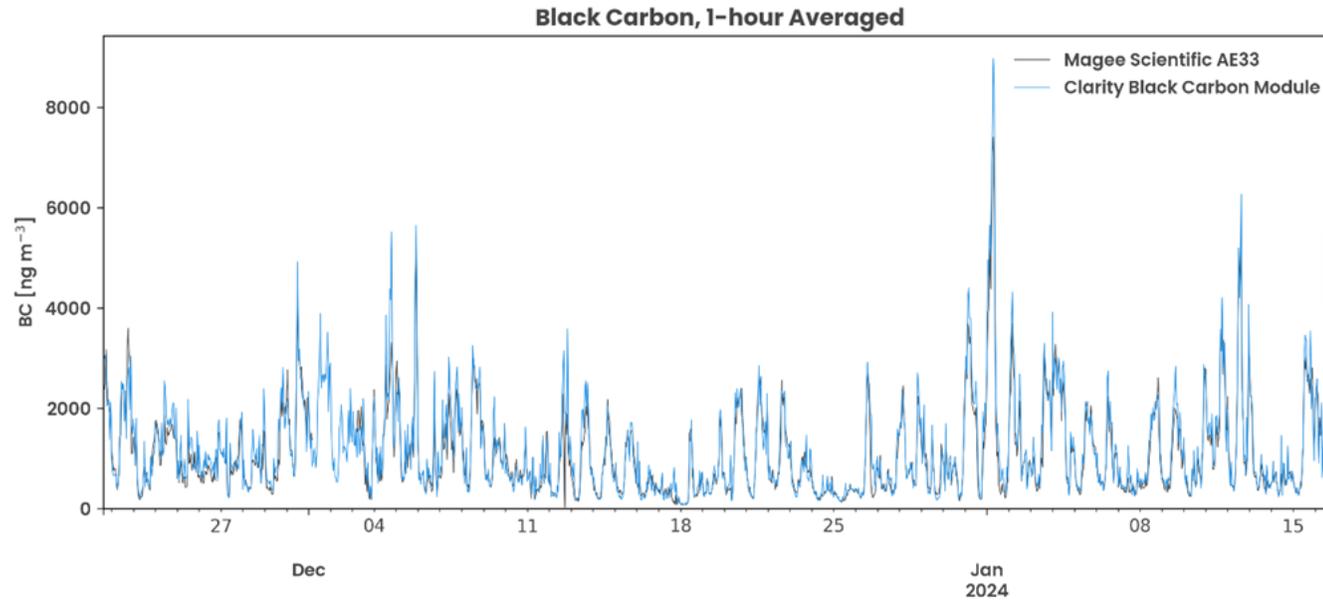

# 4

**Best-in-class data quality**

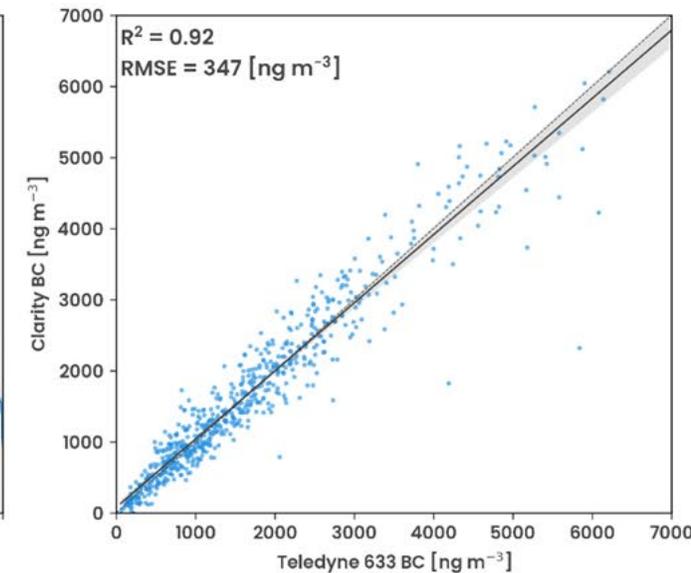

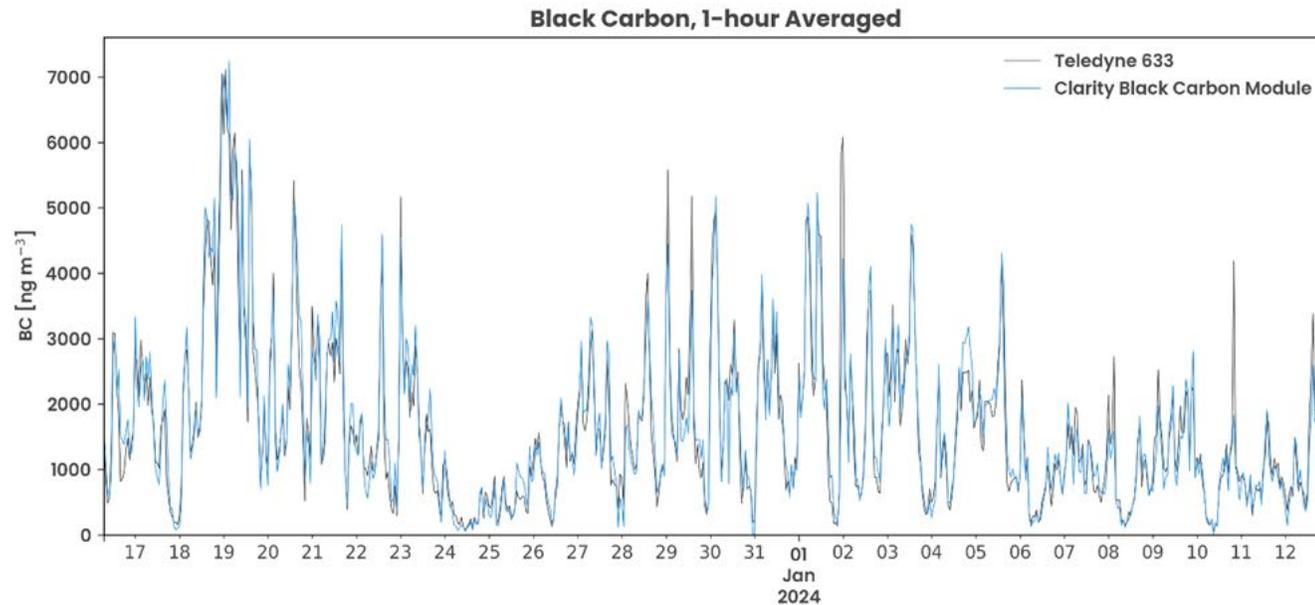

# Black Carbon Module: Comparison with Reference

# Market Comparison

	<b>Apex AIR Products</b>	<b>Others</b>
Accuracy	80 – 85%	50 – 75%
Versatility	Multi-pollutant w/ same device	Different devices per set of pollutants
Calibration	Co-location, correction, or reference gas cylinders	Co-location or machine learning
Particles	Accurate fine and coarse particles	Accurate fine particles
Range of pollutants	Full range: ambient, industry, meteo	Limited range
Power supply	Compact solar panel or mains + internal battery	Mains or big solar panel w/ external battery
Power consumption	Low – up to 20 days w/o power	High – up to 3 days w/o power

**Delivering the Right Results for VOCs**

**Community air monitoring**

**Nutech 2703 Automatic air sampling device**

**Accurate Measurements of VOC's in air**

# Old School vs Nutech

# Nutech 2703

is the most advanced  
canister-based  
sampler on the market

- Integrate the functions of flow controller, flow calibrator, pressure gauge, filter, and timer
- Control by mobile App, computer or on board
- Waterproof design
- Complete quality control (graphs vacuum before, during, and after)
- Highly portable
- Change flow rate without replacing the hardware
- Programmable: start time any time within 7 days

# New Triggered version

**Delivering the Right Results for VOCs**

Please stop by **Booth 409** for a hands-on demonstration of the **2703** and to further discuss your needs...

# Aeris MIRA: THE NEXT GENERATION OF GAS SENSOR TECHNOLOGY

---

NAAMC Community Air Monitoring Showcase

Martin Yau

[Martin.Yau@aerissensors.com](mailto:Martin.Yau@aerissensors.com)

# Aeris MIRA Platform: Middle InfraRed Analyzer

## *Redefining the State-of-the-Art in gas monitoring*

Sensor Engine

- Direct absorption middle infrared analyzer
  - <1 ppb/s sensitivity, ppt-ppb level accuracy
  - No fragile optical cavity
- Patented Folded Multi-Pass Cell
  - Long pathlength-High Sensitivity
  - Low Volume-Compact Design and fast response time
- Meets GAW targets for precision and accuracy: CO<sub>2</sub>, CH<sub>4</sub>, N<sub>2</sub>O and H<sub>2</sub>O
- Three platforms: Pico, Strato & Ultra
  - Fixed, handheld, mobile & drone monitoring
  - >700 units fielded, 10 years development

***10x reduction in size, weight, and power consumption compared to similar class analyzers***

# MIRA SERIES: Pico, Ultra, and Strato

## MIRA PICO Series: Handheld/Portable

- <1ppb/s sensitivity typical
- Lunchbox sized (5.7 l vol., 2.75kg/6lbs)
- AC/DC, 15W, 6hr battery built-in, GPS, Wi-Fi, RS-232

## MIRA Ultra Series: Low Drift: Fixed or Portable Versions

- Same core technology as Pico Series, except...
- Low drift via **temperature stabilized optical core**
  - 1-2ppb drift typical long term
- Rackmount or Portable version, optional battery

## MIRA Strato Series: Drone Applications

- Same as Pico, but smaller and lighter (2.8l vol., 1.9kg)
- 1.5-hour battery, ruggedized design

***MIRA is suitable for fixed, handheld, and mobile applications***

# MIRA: Mid-IR Direct Absorption Spectroscopy

## • Direct Absorption Spectroscopy

- Laser is scanned in wavelength, transmission is measured vs wavelength
- No fragile optical cavity
- 100x less susceptible to optical contamination than cavity-based systems
- Simple, sensitive, accurate, robust

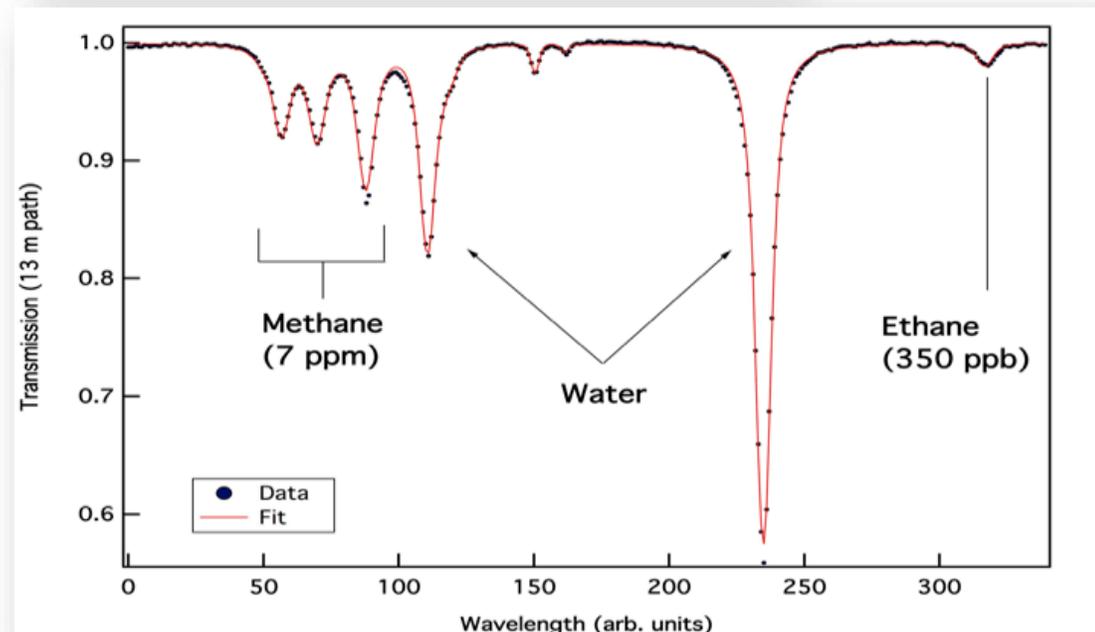

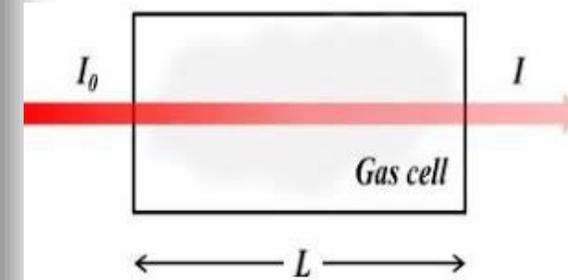

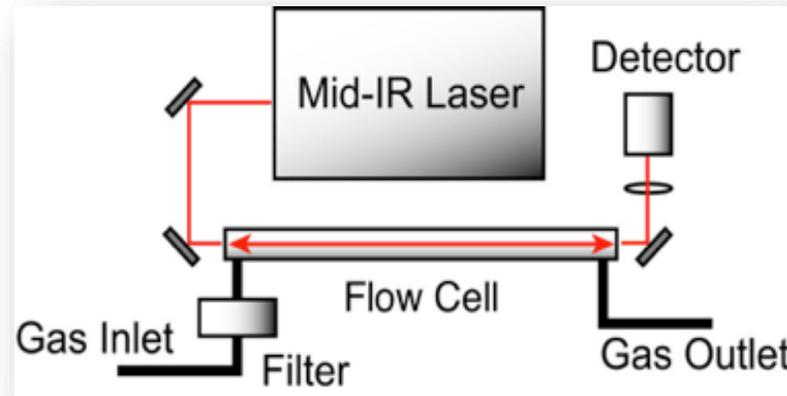

## • Wide dynamic range: ppt to % levels

## • “Fingerprints” are unique and unmistakable in the Mid-IR

- Traceability via saved spectra
- Stronger absorption in MIR eliminates need for optical cavity

## • GAS TYPES AVAILABLE

$\text{CH}_4$ ,  $\text{C}_6\text{H}_6$ ,  $\text{C}_2\text{H}_2$ , EtO, HCHO,  $\text{N}_2\text{O}$ ,  $\text{CO}_2$ ,  
CO, OCS

# AERIS TECHNOLOGIES NEW PRODUCTS

## • MIRA ULTRA EDDY COVARIANCE

- Simultaneous measurement of  $N_2O$ ,  $CH_4$ ,  $CO_2$  and  $H_2O$  in single enclosure
- Unmatched  $< 400$  ppt for  $N_2O$ ,  $< 250$  ppb  $CO_2$ ,  $< 1.2$  ppb  $CH_4$  and  $< 15$  ppm for  $H_2O$  at 10 Hz
- Closed path with robust optics
- Remotely accessible
- Built in WiFi, RS-232 and optional analog out

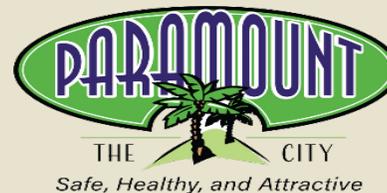

## • MIRA ULTRA $CO_2$ Isotope Analyzer

- Combination of precision, low drift, portability and affordability
- Simultaneously Measures  $\delta^{13}C$  and  $\delta^{18}O$  with precision of  $< 0.25$ /mil
- Lightweight, less than 5 kg
- Low Power (25 W)
- Data Acquired up to 10 Hz

# COMMUNITY MONITORING HEXAVALENT CHROMIUM – THE CITY OF PARAMOUNT

- Presented by
- Randall Baxter
- *Project Manager*
- Trinity Consultants
- Santa Clarita, California
- **EPA NAAMC New Orleans**

August 12<sup>th</sup> 2024

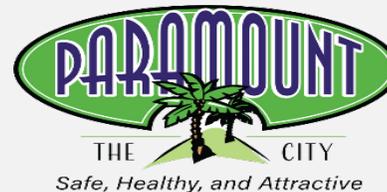

## CURRENT MONITORING OBJECTIVES

- In November 2021, the City of Paramount retained Trinity Consultants to continue SCAQMD's routine hexavalent chromium (Cr6+) monitoring throughout the City of Paramount to identify and investigate potential sources of Cr6+ in the adjacent communities within the City of Paramount and to provide results on the Paramount Environmental Portal : <https://paramountenvironment.org/air/>
- The SCAQMD has noted that Cr6+ concentrations above 1.0 ng/m<sup>3</sup> over three consecutive days is of concern and that readings below **1.0 ng/m<sup>3</sup> are considered as relatively normal "background" levels.**

## NETWORK OPERATIONS

- Filters are run every 1-in-6 days based upon the annual EPA Sampling Schedule
- Each of the samples are operated over a 24-hour period (midnight to midnight)
- Filters are collected the day following each sample run and are shipped to laboratory for analysis

# SAMPLERS-CURRENT NETWORK

The network includes two types of samplers:

**Tisch Wilbur** (three locations)

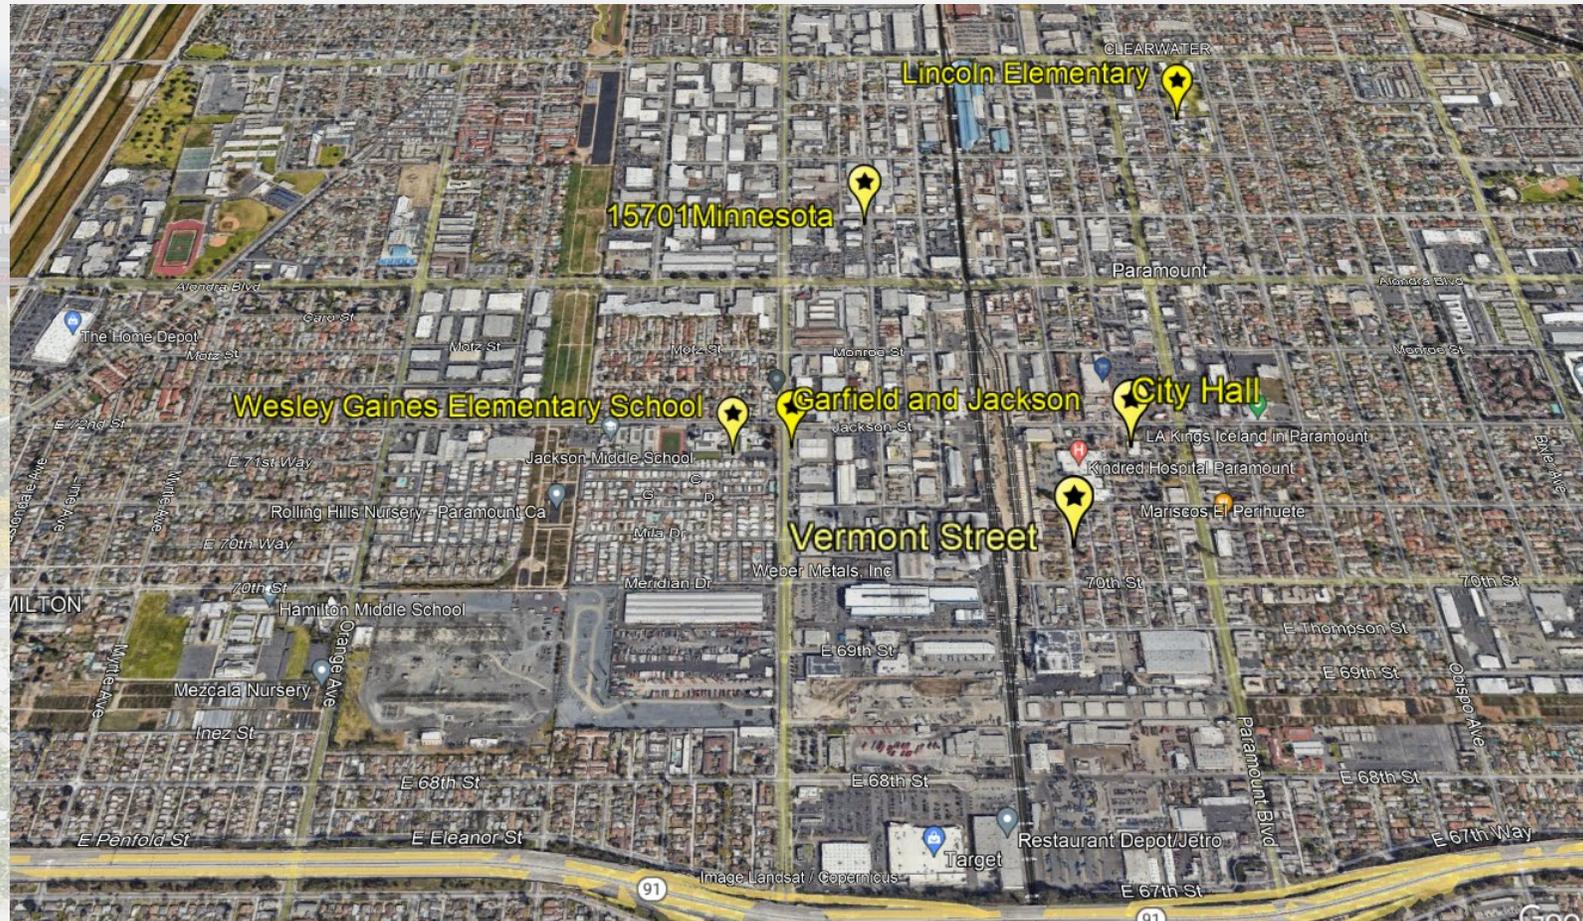

**BGI Omni** (three locations, solar/battery-powered)

- Meteorological tripod also located at City Hall location.
- With current samplers there has been a sample recovery rate of over 95%

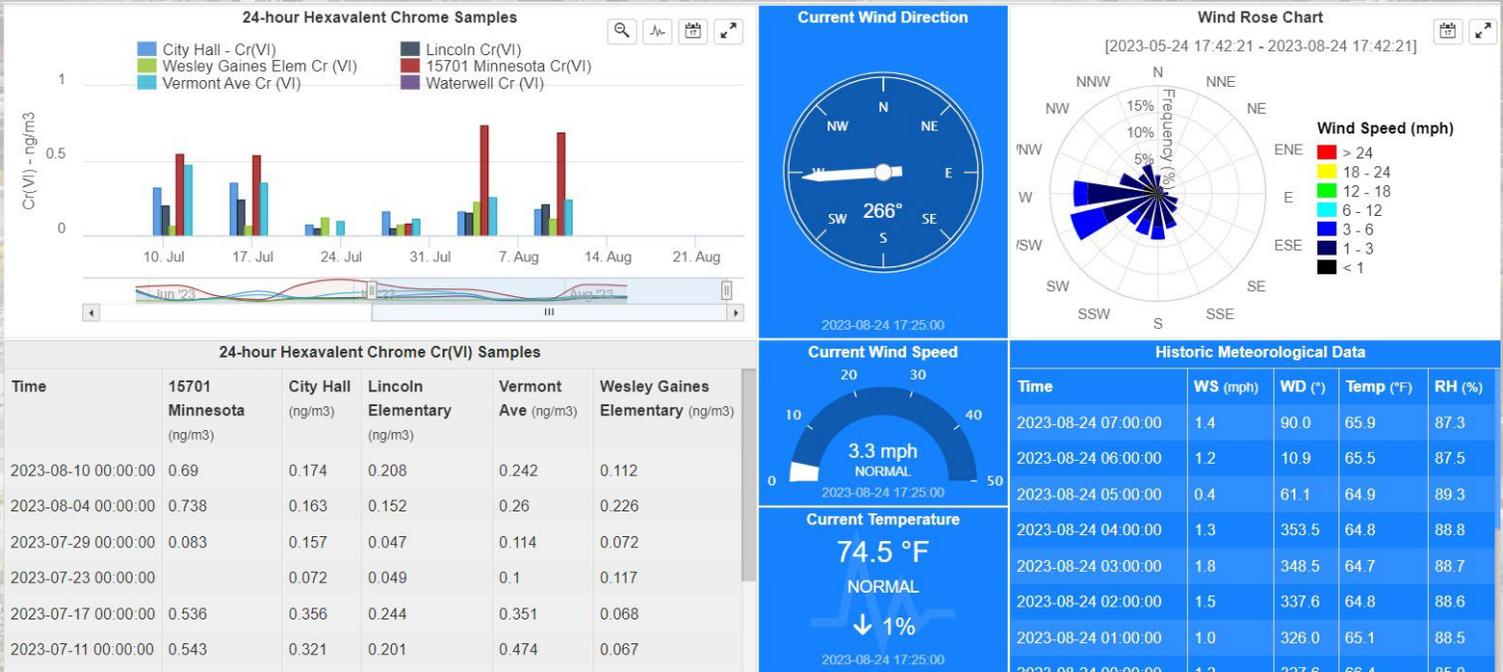

# SITE LOCATIONS

- **Current Monitoring Locations :**
- **Wesley Gaines Elementary School (Wilbur)**
- **Lincoln Elementary School (Wilbur)**
- **City Hall (Wilbur)**
- **Infront of 15701 Minnesota & Madison (Omni FT)**
- **Vermont Street (Omni FT)**
- **South East Garfield Street and Jackson Street (Omni FT)**

# ENVIRONMENTAL PORTAL

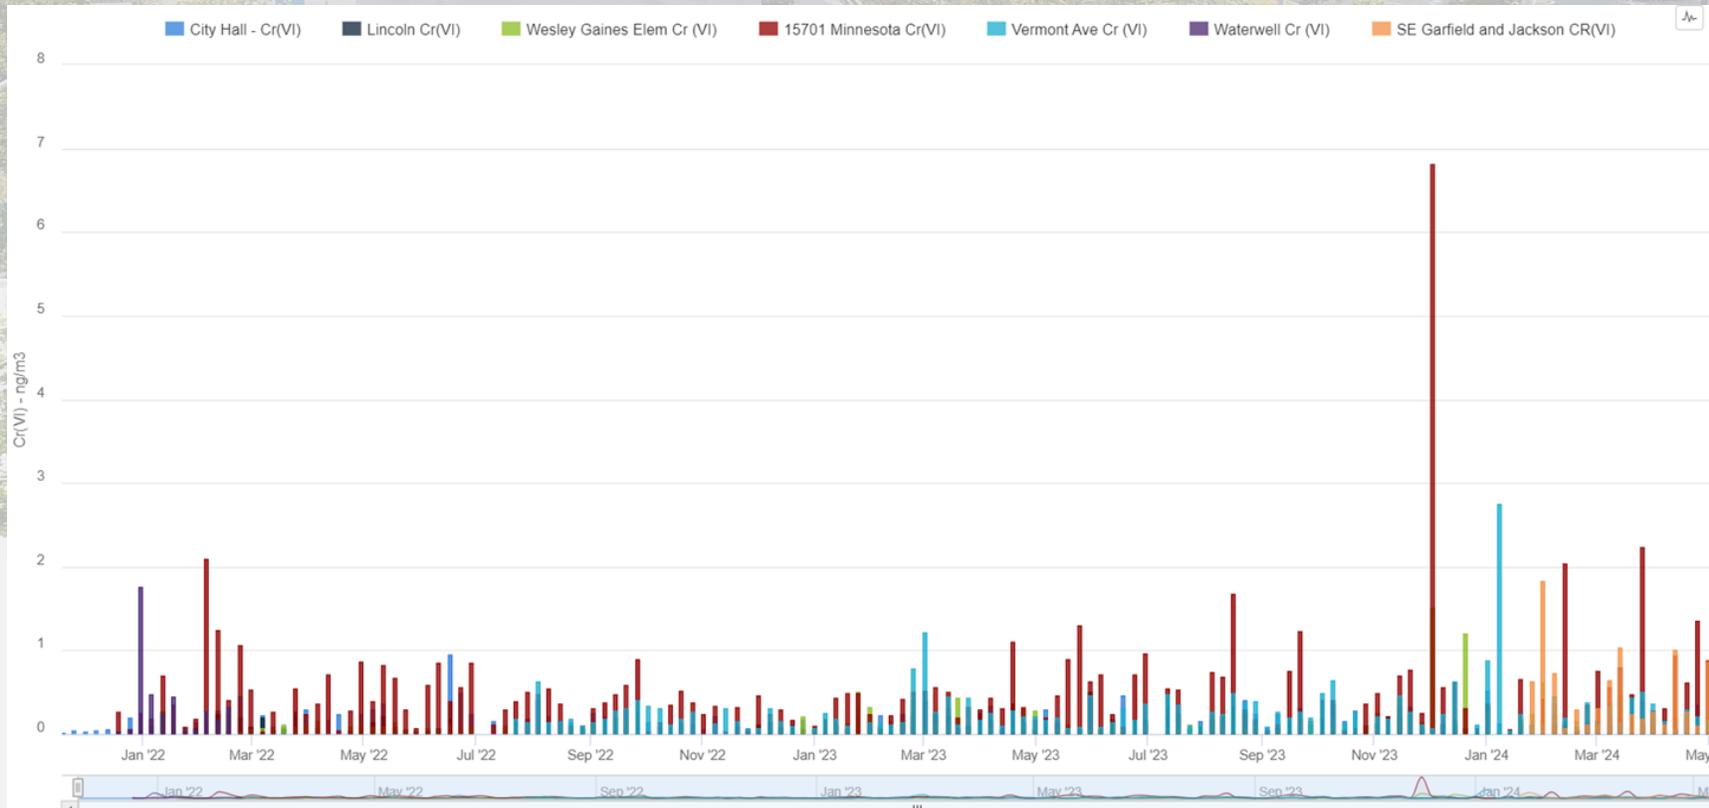

Portal available for public viewing at <https://paramountenvironment.org/air>

- Samples results are posted within a week of collection
- Portal include City Hall Meteorological Data
- Display also hosts historical data

# SAMPLE SUMMARY THROUGH 6-5-2024

	City Hall	Waterwell	Jackson & Minnesota	15701 Minnesota	Wesley Gaines	Lincoln	Vermont	Garfield & Jackson
<b>AVERAGE</b>	0.175	0.351	0.180	0.513	0.156	0.126	0.270	0.430
<b>MIN</b>	0.000	0.029	0.033	0.000	0.021	0.016	0.000	0.042
<b>MAX</b>	0.950	1.765	0.514	6.807	1.502	0.502	2.751	1.835
<b>Samples</b>	147	11	23	146	123	116	109	23

# Helping Communities Address AQ problems

Question	Support Needs	Sonoma Technology Examples
1. Do we have air quality problems?	Monitoring, data mgt. & analysis	Maywood, CA
2. If so, what are the pollution sources?	Source apportionment, data eval.	Eden Park, DE
3. Are problems getting better or worse over time?	Data and trends analyses	Near-road (TPF)
4. Who is most exposed or at risk?	Monitoring/modeling, health risk	Fresno, CA (CHAPS)
5. What pesticides have been applied in my community?	Sampling and interactive community dashboard	San Joaquin Valley
6. How can the community assess progress?	Sensor use, real-time data access	Sacramento, CA
7. How do we educate and engage our community?	Outreach information, data access	Torrance, CA
8. How do we educate and engage our youth?	Curriculum, teacher training	Kids Making Sense

The following slides highlight common community needs

# Environmental Justice (EJ) Monitoring, Source Apportionment, Emissions: Maywood, CA

- Source identification goal
- Continuous monitoring
  - PM<sub>2.5</sub>, PM<sub>10</sub>, black carbon
  - Particulate metals with Xact 625i
  - Wind speed/direction
  - Temp., relative humidity
- Filter samples for Cr-6
- 20-sensor (PurpleAir) network
  - Spatial understanding
  - Community engagement

## Nearby sources

- I-710 freeway, east
- Rail lines and rail yard, north
- Arterials with heavy-duty diesel trucks
- Multiple industrial sources

# Education: Kids Making Sense

Kids Making Sense® is an educational program to teach youth how to measure pollution using air quality sensors, to interpret the data they collect, and to take action to reduce emissions and air pollution exposure.

## Air Quality Kits

Comprehensive classroom kits for grades 9-12

## Sensor Loan Program

Sensors and a guide for a turn-key sensor loan program.

Ideal for libraries, science museums, and schools.

## Build a Sensor Kits

Learn about the various components that make up a particle sensor, the purpose of each piece, and then build a complete sensor!

## Other Items & Services

Teacher Training & Virtual Scientist Classroom Visits

Mobile PM Sensors

Advanced AQ curriculum

Curriculum Module Development

## Some Recent Program Adopters:

- Blue Lake Rancheria
- Spokane Regional Clean Air Agency
- The Cleveland Division of Air Quality
- Strategic Energy Innovations
- Environmental Community Advocates of Galena Park
- Tree Fresno
- Kids Action Thru Science
- Newcastle University

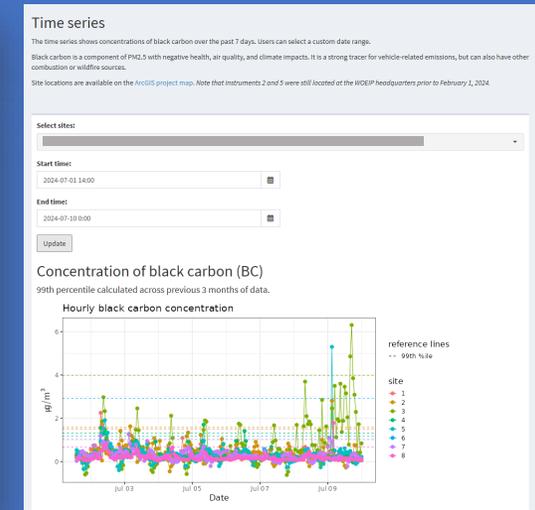

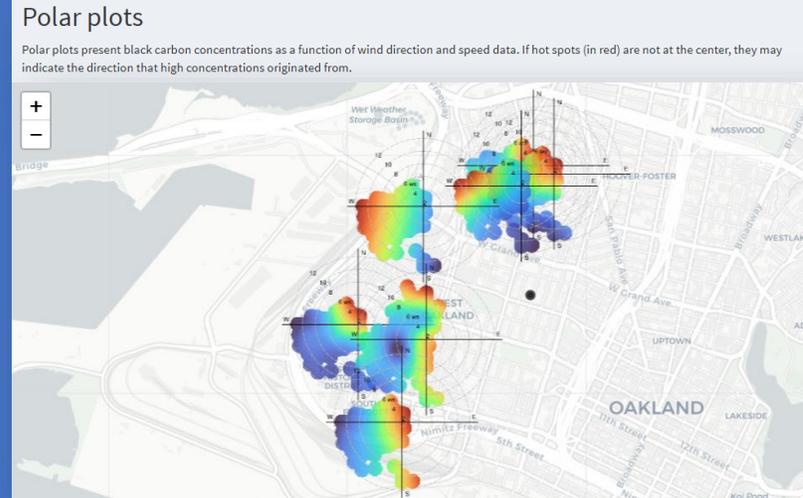

# Interactive Dashboards

- Provide transparency, promote education, improve understanding, and encourage action
- Accessible to the public
  - Tooltips and help windows guide a user to take meaning from the data

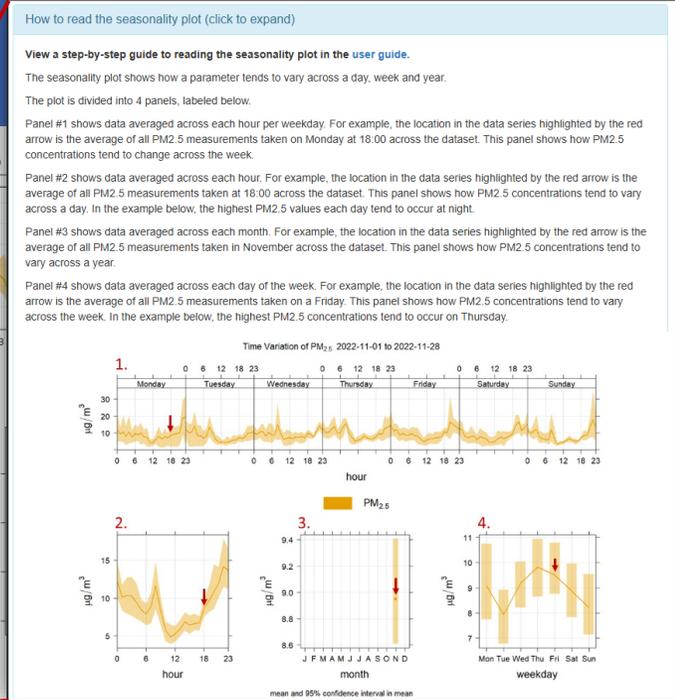

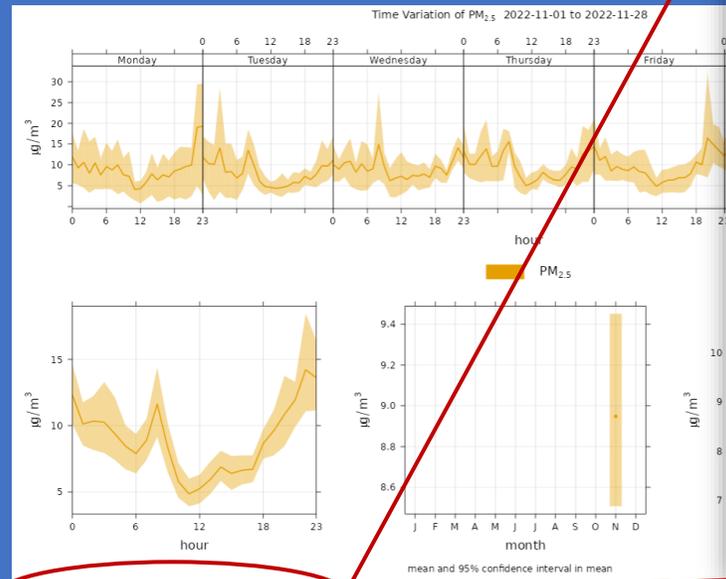

## Examples:

- Community group raised concern over unequally polluted neighborhoods
  - Established network of point monitors with a public dashboard to view recent measurements/insights
- Tribe in N. California concerned about effect of wildfires and residential woodburning on health
  - Assisted with installation of T640 and multiple PM sensors to measure local conditions, identify sources.

## OPEN DATA MODEL

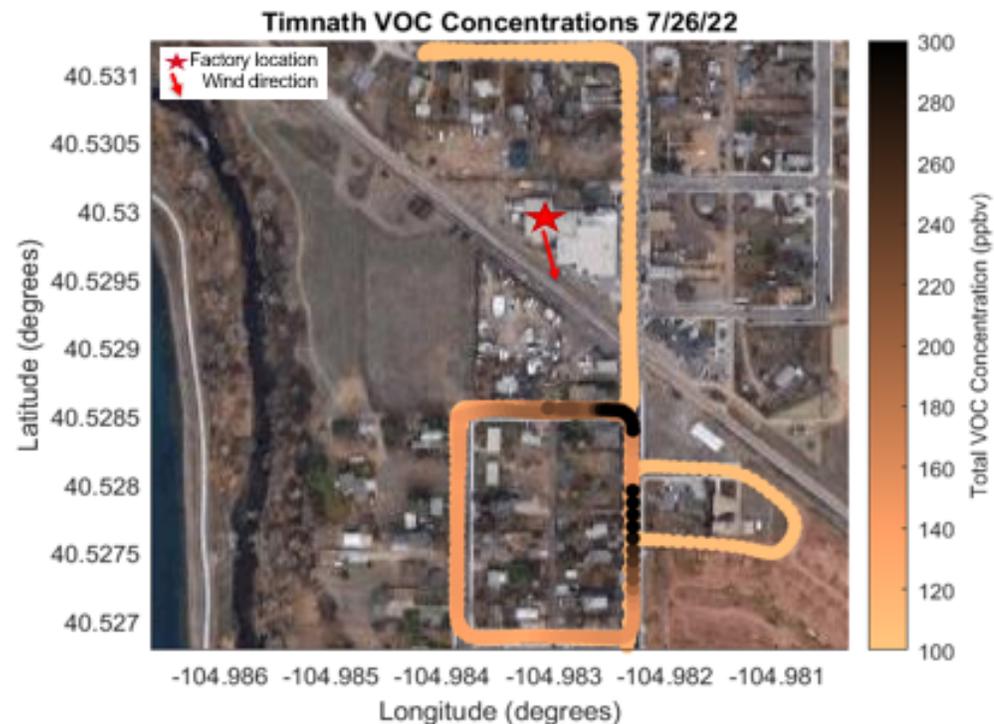

- Customer controls where devices send data
- Customer decides what cellular plan to use
- **DEVICES CAN BE OPERATED WITH NO RECURRING FEES OR MONTHLY SUBSCRIPTION TO SENSIT**

# MOBILE MONITORING

Mobile PID data allows for VOC “mapping” at a fine spatial scale.

**Fig. 2:** This figure shows the domain over which we conducted mobile measurements near the cabinet factory in Timnath, CO, on July 26<sup>th</sup>, 2022. The shaded circles represent the VOC concentration (in ppbv of isobutylene equivalent) distributed spatially within this domain. The red star marks the location of the factory, and the red arrow shows the prevailing wind direction at the time the VOC peak was observed.
